

# WHAT TO EXPECT

## audiometric test- two booth facility

In preparation for your upcoming audiometric test in our two booth testing facility, we ask that you review the following:

### What to expect

- Expect us to arrive **30 minutes before your scheduled test time** to allow for set up and equipment calibration
  - When onsite, we will ask for **two power sources preferably on separate breakers** (we have the extension cords) and a relatively quiet space to ensure appropriate background noise levels.
  - A hearing test questionnaire is attached. We ask each worker to have it pre filled out so that we can stay time efficient.
- If you would like us to follow a schedule, please provide a copy.

### During the test

- We will test two workers at a time which will take approx. Please ensure they arrive together.
- We ask that if workers not wait for their test too close to our testing facility as conversation can be a distracting background noise.
- Each worker will receive a copy of their test results. We will review each worker's test results with them as well as hearing protection used.
- If each worker can bring in what they wear for protection that would be ideal.

### After the test

We will provide the employer with a comprehensive report of results within 7-10 business days after tests are completed.
