

# WHAT TO EXPECT

## audiometric test- one booth

In preparation for your upcoming audiometric test, we ask that you review the following:

### **What to expect**

- Expect us to arrive approx. 20-30 minutes before your scheduled test time to allow for set up and equipment calibration
- When onsite, we will ask for a power source (we have the plugins) and a relatively quiet space to ensure appropriate background noise levels.
- A hearing test questionnaire is attached. We ask each worker to have it pre filled out so that we can stay time efficient.
- If you would like us to follow a schedule, please provide a copy.

### **During the test**

- We will test one worker at a time. Each test takes approximately 10-12 minutes.
- We ask that if workers not wait for their test too close to our testing facility as conversation can be a distracting background noise.
- Each worker will receive a copy of their test results. We will review each worker's test results with them as well as hearing protection used.
- If each worker can bring in what they wear for protection that would be ideal.

### **After the test**

We will provide the employer with their comprehensive test results within 7-10 business days after tests are completed.
