

ROCKY MOUNTAIN
MOBILE HEARING TESTING LTD

WHAT TO EXPECT

custom hearing protection

In preparation for your upcoming custom hearing protection impressions, we ask that you review the following recommendations:

What to expect

Workers will have an impression taken of their ear. This will include injecting a quick set impression material in and around the ear for a custom mold. The impression takes approx. 1 minute to set. Two workers can have their molds taken at one time.

The day before

Workers are encouraged to groom their ear of excessive ear wax and hair in preparation. Because mold material is being injected in their ear canal, ear hair can be quite uncomfortable to be tangled in the mold once it is removed. As well, hair in the ear can potentially interfere with an good impression.

During the mold impression

Workers are asked to keep their jaw still so that the impression material can create the best mold possible.
